High School Students' Access to and Use of Technology

Access to technology is essential to educational success as well as workforce and community development. However, geographical, income-based, and racial/ethnic disparities in technology access persist.

What devices do students have access to?

99% of students have access to at least one device at home.

91% of students reported at least one device accessible at home was a smartphone, when any device was available.

62% of students reported access to a desktop computer in school, making it the most common device.

Students who reported having only one device at home were typically among traditionally underserved groups.
